

Technical Data Sheet

DEFOAMER MST™

Rinsible silicone defoaming tablet

Defoamer MST defoaming tablets are designed for use in coolant and washer sumps ranging in size from 10 gallons to 500 gallons. The slow release feature of the tablet means that a constant level of defoamer is always present in the fluid and that carry-out is minimized.

TYPICAL PROPERTIES

Description	White tablet, odorless
pH (0.1% by weight solution)	7.0 ± 0.5
Weight (grams)	28.8 ± 0.3

RECOMMENDED APPLICATIONS

1. Coolant systems for individual machines should use one (1) **Defoamer MST** for every 25 to 50 gallons of fluid in the sump. Each treatment will last between one and two weeks -- depending on how much the machine is used, type of material machined, etc. **Defoamer MST** is compatible with all metalworking fluids that have foul odors.
2. The most effective way to administer the **Defoamer MST** in a system is to suspend the tablet on a string or hook in the cutting or washing fluid

AVAILABILITY

Defoamer MST is available by the case.
